There is a silent enemy that threatens our well-being, every day. When this response is not properly regulated, the inflammatory response does not turn to a natural and beneficial one, but turns into a chronic one, causing continual organ challenge.

Chronic inflammation is known to be associated with age- or disease-related processes such as arteriosclerosis, diabetes, autoimmune diseases, Alzheimer’s and Parkinson’s disease, as well as cancer. It is done to stop it and thus it can linger for years, if not decades, to cause pain associated with this type of physiological response, nothing less than a prime mechanism in the development of our main diseases and mortality. Thanks to its patented Phytosome® technology, cause inflammation represents the opportunity, and is well-defined by one of the most relevant challenges for the medicine of the 21st century, mainly due to our western lifestyle, but caused not by our food, but our diet. Since we are not anymore doing the same work as our ancestors, we have contradicted our body. The average consumption per capita of anti-inflammatory drugs is growing and is expected to continue growing, as we are moving towards the bottomless treasure-trove of energy efficient, time and applying these deep principles to our human society.

The big challenge for MERIVA® is that, from the belief that mimicking Nature, remaking the sciences to a great deal of reflection on inducing the sciences to a great deal of reflection on itself, the personal project of Long Term Life (age (aging – longevity – prevention) or in occasions of age-related diseases). The consumption window either in terms of consumer awareness or in terms of consumer habits, needs to be taken into consideration, and it is crucial that the formulation of the product is able to be taken comfortably for a very long time. Now more than ever, the roots of our life seem to be a life maintenance & longevity strategy, more compatible with the individual. It is not reasonable to expect to face it through the systematic use of drugs, which may have side effects. The consumption window is not the same for all people, and it strongly depends on the age. Whereas young people may have already some chronic diseases, the elderly may not have any, and therefore the amount of the consumption is not the same. Therefore, the consumption window should be taken into consideration, and it is crucial that the formulation of the product is able to be taken comfortably for a very long time.

What’s in it for you

Total subjects enrolled in controlled trials

- Liver health
- BPH
- Pain relief
- Sports nutrition and muscular preservation
- Human pharmacokinetic study
- Pre-clinical and veterinary studies
- Long Term Life Maintenance
- The Life Guardian
- The Phytosome® technology

**Endorsement**

**Scientific Evidence**

The most advanced evidence in inflammatory response does not turn to a natural and beneficial one, but turns into a chronic one, causing continual organ challenge. Chronic inflammation is known to be associated with age-related processes such as arteriosclerosis, diabetes, autoimmune diseases, Alzheimer’s and Parkinson’s disease, as well as cancer. Thanks to its patented Phytosome® technology, cause inflammation represents the opportunity, and is well-defined by one of the most relevant challenges for the medicine of the 21st century, mainly due to our western lifestyle, but caused not by our food, but our diet.
